

Ser. No. 09/804,403

a reclosable fastener structure including an integral skirt structure comprising a web material extending therefrom and including opposed distal margin structures;

said web material of said integral skirt structure being sealed to said inside surfaces at a plurality of predetermined sealing areas;

a barrier web material extending between and coupled to said distal margin structures; and

a header structure, said header structure at least partially enclosing said reclosable fastener structure.

#### Claim 104

A reclosable bag for filling with at least one food product, said reclosable bag comprising:

at least one sheet of web material including at least two areas of structural weakness, having at least one fold structure located between and defined by said two areas of structural weakness, and an opening;

a reclosable fastener structure including a skirt structure of skirt web material extending therefrom;

said skirt structure including a distal margin;

said distal margin being coupled to said web material such that said areas of structural weakness are located between said distal margin and said reclosable fastener structure;

said reclosable fastener structure extending past said areas of structural weakness;

Ser. No. 09/804,403
